ABSTRACT

A tube having in its radial direction from the inside to the outside, in an inner layer based on a fluororesin (or fluoropolymer) and intended to come into contact with a flowing fluid, formed from a blend comprising a semicrystalline thermoplastic fluororesin and an ABC triblock copolymer, the three blocks A, B and C being connected together in this order, the blocks being linked by means of a covalent bond or of an intermediate molecule linked to the blocks via a covalent bond, the A block being compatible with the fluororesin, the B block being incompatible with the fluororesin and incompatible with the A block, and the C block being incompatible with the with fluororesin, the A block and the B block.
